Mobile Application _Testing Report for _Updated Version Including Donor Flow (Simple & Advanced Modes), OTP Changes, and Website Comparison

Organization	Sharjah Charity International
Department	IT Department
Prepared By	Abida Gul
Designation	QA (Manual Testing)
Prepared For	Mobile_App_Application
Testing Period	April 2026
Environment	Mobile_Application
Report Type	Testing_Bug Report
Date of Submission	16 April 2026
Reviewed By	Development Team
Document ID	SCI-API-ARABSEA-APR-2026-005

Bug 1: Nationality Not Saving After Selection

Title:

Nationality dropdown value not persisted after saving registration form

Environment:

- Platform: Web / Mobile
- Module: Registration Page
- Build Version: Latest

Preconditions:

- User is on Registration screen

Steps to Reproduce:

1. Navigate to Registration page
2. Select any value from **Nationality dropdown**
3. Fill remaining required fields
4. Click on **Save/Submit**
5. Reopen the same record

Expected Result:

Selected nationality should be saved and displayed correctly

Actual Result:

Nationality value is not saved / not displayed after submission

Severity: High

Priority: High

Notes:

- Possible issue in API payload or DB mapping
- Check binding between dropdown and backend field

Edit Profile ✓ Save

First Name Last Name

Gender

Age

Nationality

Contact Info

Residence Info

Emirate

🐛 Bug 2: Back Button Not Working in Seasonal Campaign

Title:

Back button not functioning in Eid ul Adha category under Seasonal Campaign

Environment:

- Module: Seasonal Campaign
- Category: Eid ul Adha

Steps to Reproduce:

1. Open Seasonal Campaign
2. Navigate to **Eid ul Adha category**
3. Open any campaign record
4. Click on **Back button**

Expected Result:

User should navigate back to previous screen

Actual Result:

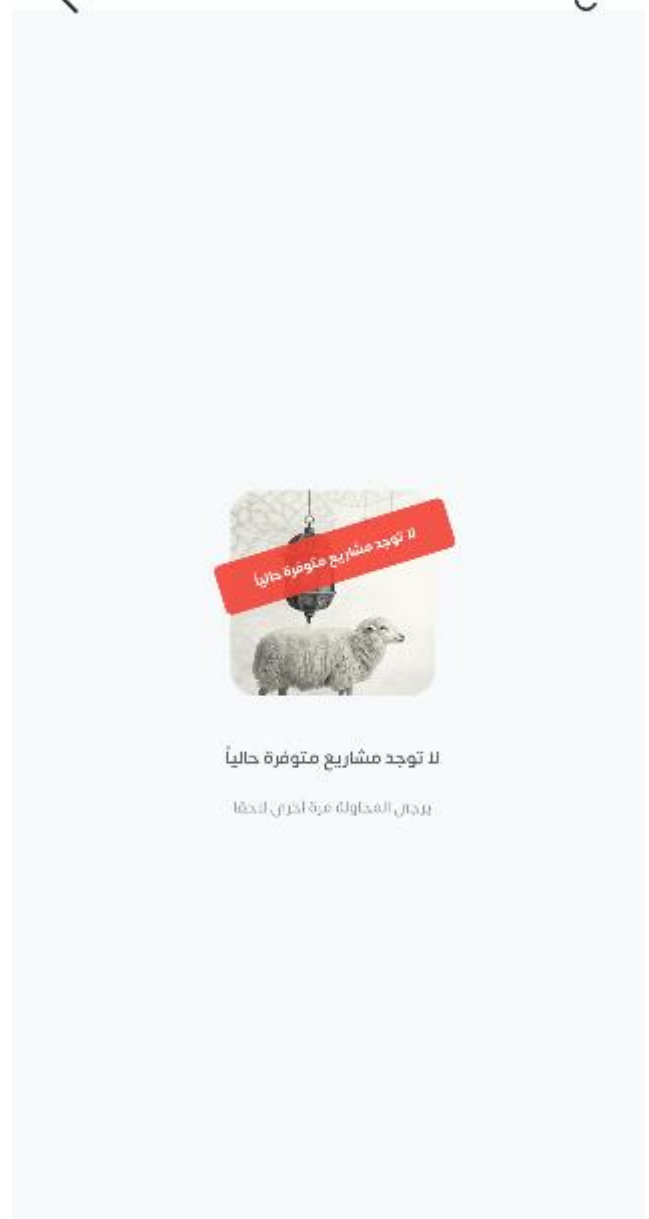

Back button does not respond

Severity: Medium

Priority: High

Notes:

- Navigation stack issue
- Possible routing or UI handler failure

Bug 3: Projects Not Opening in Productive Families

Title:

Delay and failure in opening projects under Productive Families category

Steps to Reproduce:

1. Navigate to Productive Families section
2. Click on any project

Expected Result:

Project should open instantly

Actual Result:

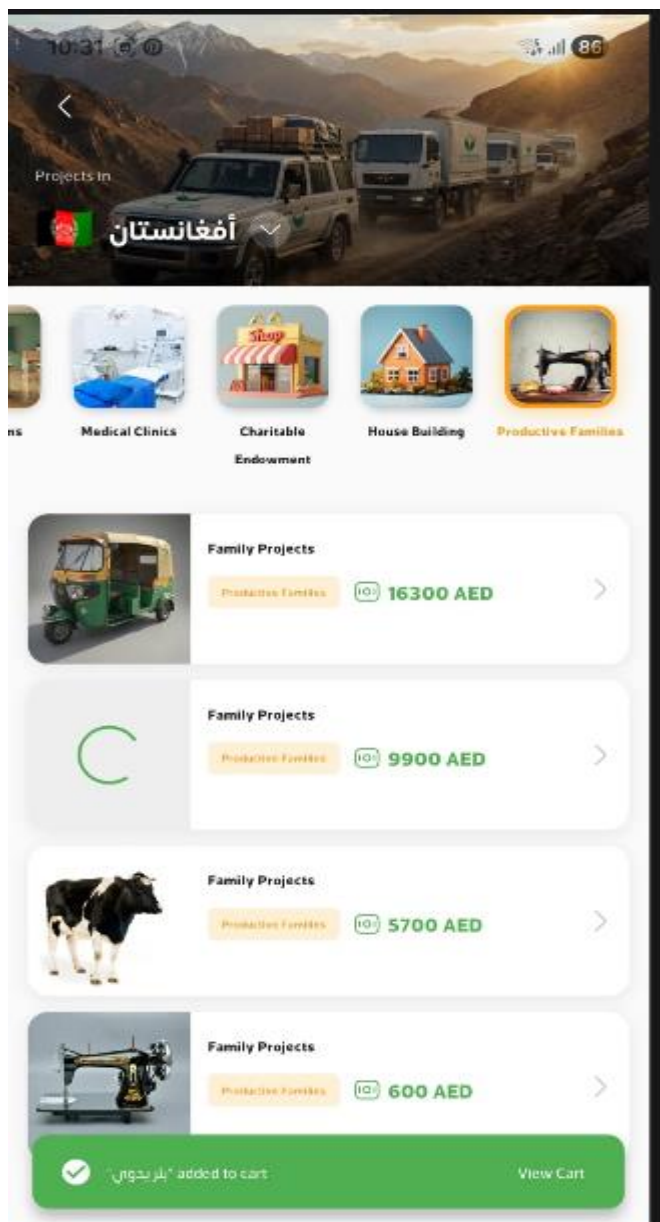

- Long loading time
- Some projects fail to open

Severity: Medium

Priority: Medium

Notes:

- Possible performance/API latency issue
- Check network calls and response time

🐛 Bug 4: Sponsorship Module – Missing Request Number in Mobile

Title:

Request Number not displayed in Sponsorship module on mobile application

Environment:

- Platform: Mobile App
- Module: Sponsorship

Steps to Reproduce:

1. Open Sponsorship module
2. Navigate through any category
3. Open request list

Expected Result:

Request Number should be visible (as in web version)

Actual Result:

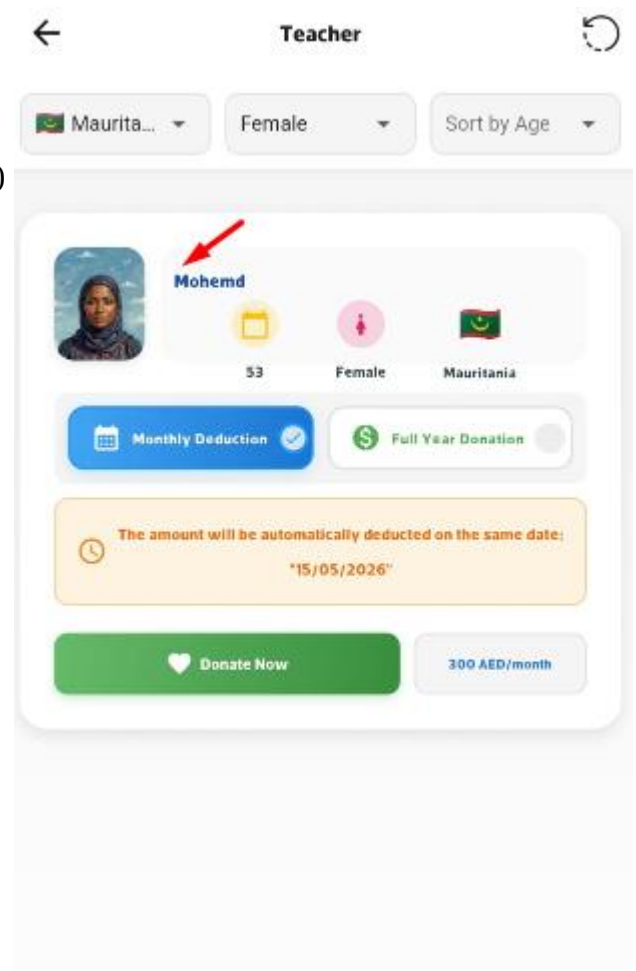

Only Name is displayed, Request Number missing

Severity: Medium

Priority: High

Notes:

- Data inconsistency between Web and Mobile
- Check API response mapping

🐛 Bug 5: Language Mismatch (English vs Arabic)

Title:

English version displays Arabic text in UI

Steps to Reproduce:

1. Switch application to English
2. Navigate to affected screens

Expected Result:

All labels should appear in English

Actual Result:

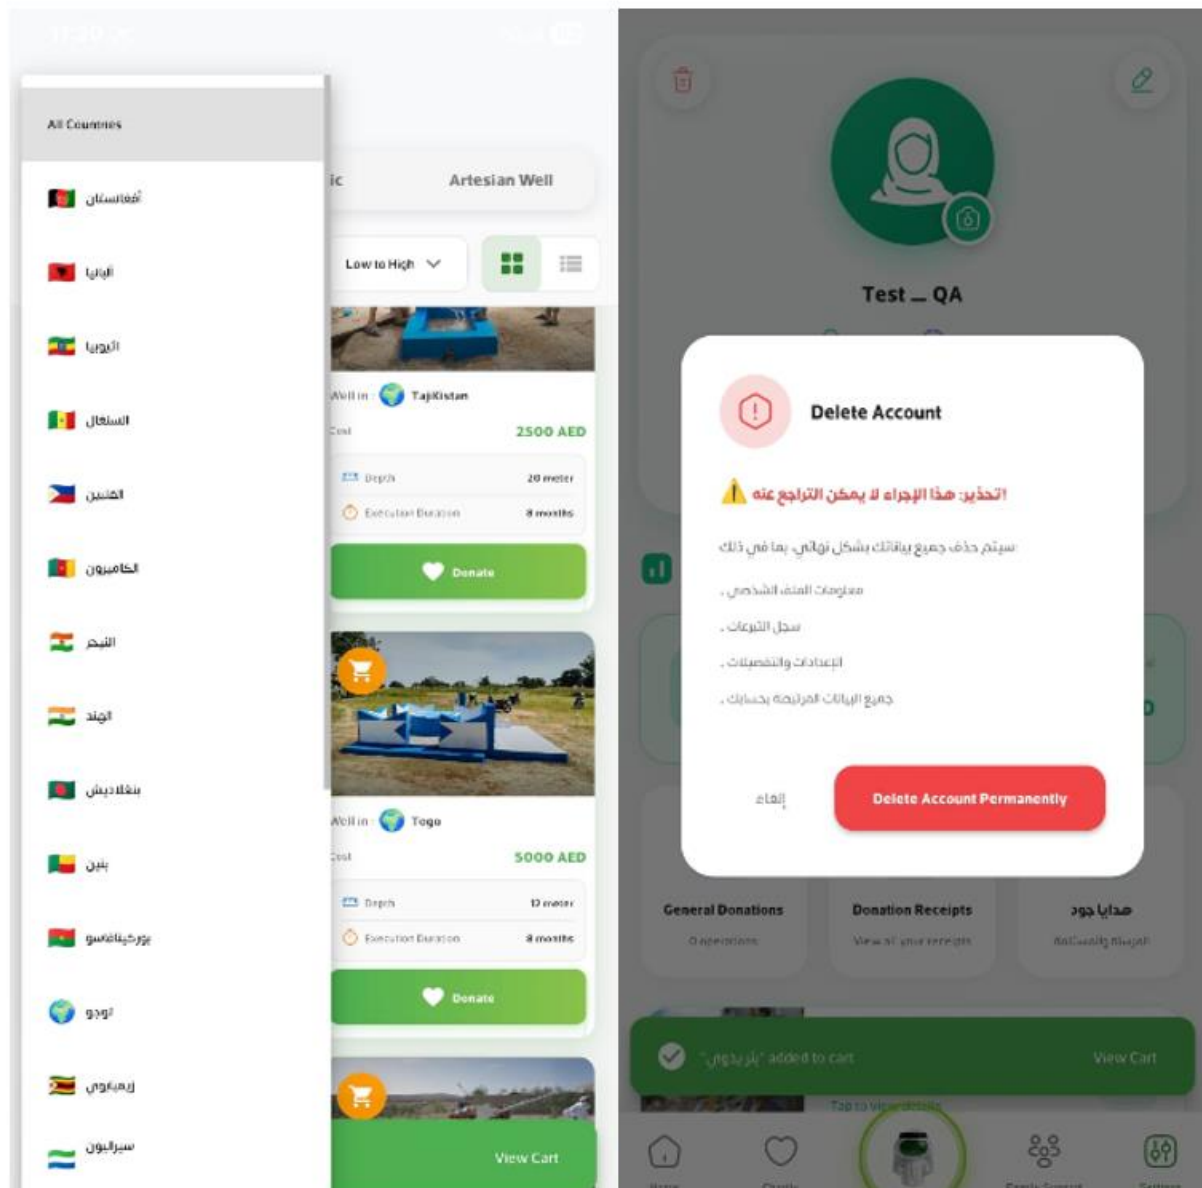

Some labels still appear in Arabic

Severity: Low

Priority: Medium

Notes:

- Localization issue
- Missing translation keys

Bug 6: UI Misalignment – Button Text Overlapping

Title:

Button text overlapping UI element (misaligned rendering)

Environment:

- Platform: Mobile

Steps to Reproduce:

1. Navigate to affected screen (as per screenshot)
2. Observe button text

Expected Result:

Text should be properly aligned inside button

Actual Result:

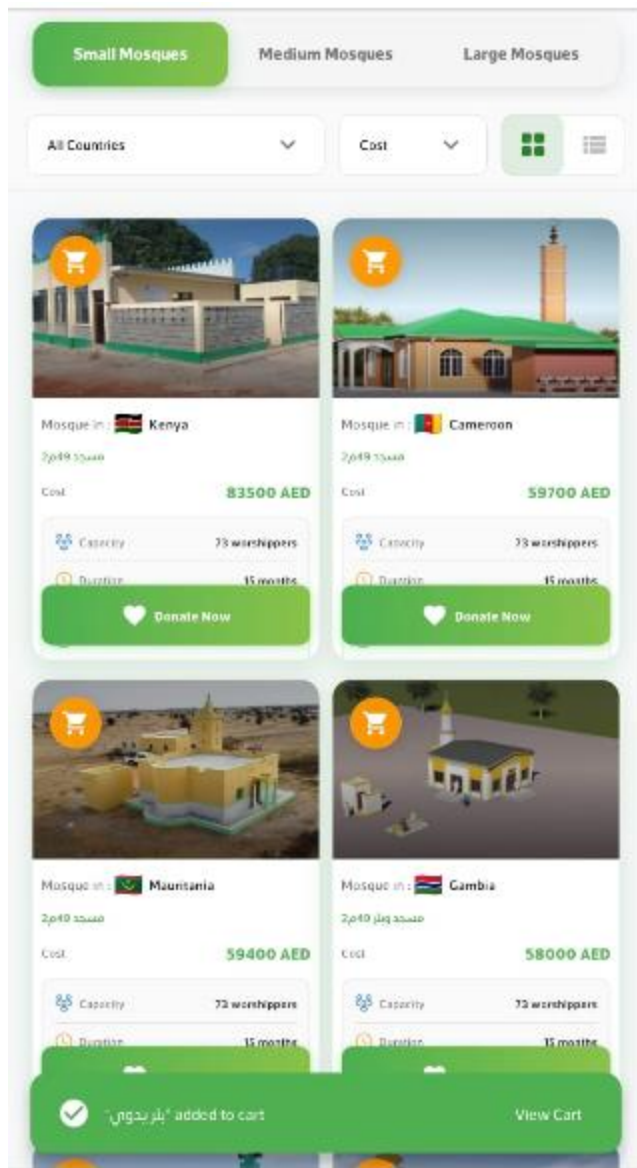

Text is overlapping above button

Severity: Low

Priority: Medium

Notes:

- UI/UX issue
- CSS or responsive layout problem

🐛 Bug 7: Deleted ID Can Be Reused / Reopened

Title:

System allows reopening or reusing an ID after permanent deletion from Profile page

Environment:

- Module: Profile Management
- Platform: Web / Mobile
- Build Version: Latest

Preconditions:

- An ID exists in the system

Steps to Reproduce:

1. Navigate to **Profile page**
2. Select any existing ID
3. Perform **Permanent Delete** action
4. Confirm deletion
5. Attempt to:
 - Reopen the same ID OR
 - Create/use the same ID again

Expected Result:

- Once an ID is permanently deleted:
 - It should **not be recoverable/reopened**
 - It should **not be reusable** in the system
 - System should restrict duplicate/reuse

Actual Result:

- Deleted ID can be **reopened or reused again**, which is incorrect

Severity: @ Critical

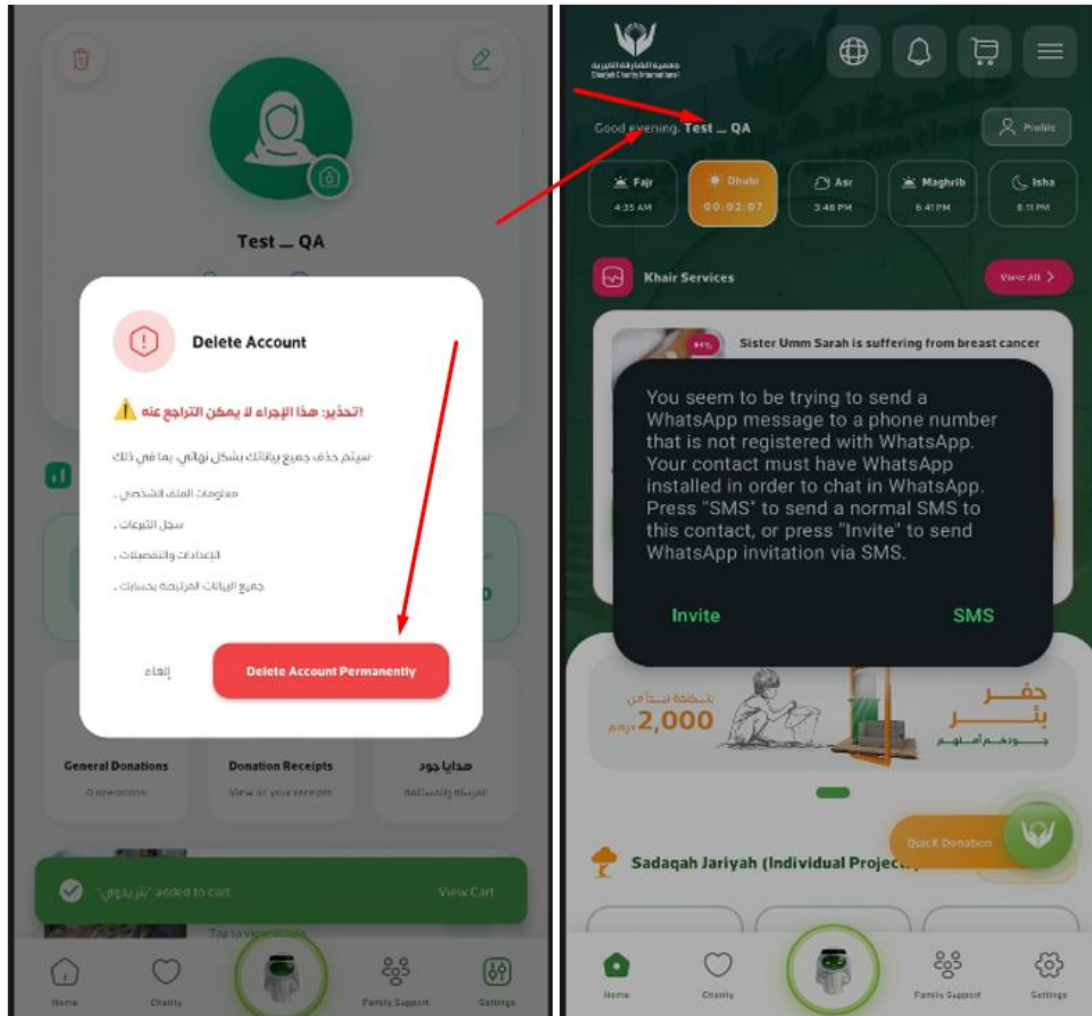

Priority: High

Impact:

- Breaks **data integrity and uniqueness constraints**
- Can cause **duplicate records / inconsistent history**
- Risk of **audit and compliance issues**

Notes / Possible Cause:

- Soft delete implemented instead of hard delete
- Unique constraint missing at DB level
- Record not properly flagged as inactive/deleted

🐛 Bug 8 Deleted account mobile number still receives OTP, but registration does not proceed after verification

Title

Module

Registration / Profile Management

Environment

- Platform: Mobile / Web
- Build: Latest build
- Page: Registration

Preconditions

- An account already exists with a mobile number

- That account is deleted permanently from the system

Steps to Reproduce

1. Delete an existing account permanently
2. Go to the Registration page
3. Enter the same deleted account mobile number
4. Request OTP
5. Enter and verify the received OTP
6. Observe the registration flow

Expected Result

System should validate the deleted account mobile number before sending OTP.

Either:

- Block OTP and show a proper validation message, such as:
"This mobile number was previously linked to a deleted account and cannot be used for new registration."
or
- Redirect user through a defined restore/re-registration flow if business logic allows it.

Actual Result

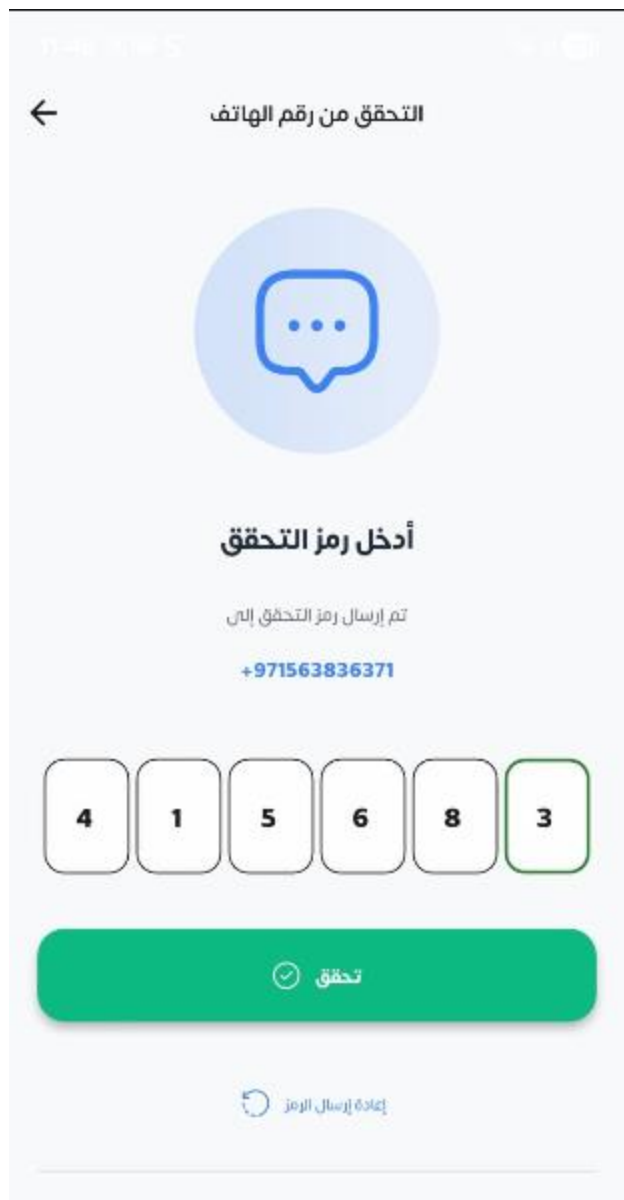

OTP is successfully sent to the deleted account mobile number, but after OTP verification the registration flow does not proceed further.

Severity

High

Priority

High

🐛 Bug 9 Add to Cart success alert persists on screen until app restart instead of auto-hiding

Title

Module

Cart / Project Listing

Environment

- Platform: Mobile App
- Build: Latest

Preconditions

- User is logged in
- Projects are available for adding to cart

Steps to Reproduce

1. Navigate to Project listing
2. Click on **Add to Cart** for any project
3. Observe the success alert message
4. Continue using the app without closing it

Expected Result

- Success alert should:
 - **Disappear automatically after a few seconds, OR**
 - **Hide on next user action/navigation**

Actual Result

- Alert message remains visible continuously
- It only disappears when the app is closed/reopened

Severity

Medium

Priority

High
